

TIRED OF SCAFFOLD MISINFORMATION? Want to know more about scaffolds than what the standards say? This is the class that will take you beyond the "minimum requirements" and beyond the standards. You will discover what a safe scaffold is, not just what the regulations say. You'll learn to recognize the correct standards and how to apply them. And you'll learn evaluation methods to ensure your scaffold is compliant and **SAFE!**

Back by request, this is the only seminar of its kind on the West Coast. And at no additional charge, **Scaffolding 103** now includes as an integral part **OSHA/EMEC Trainer Course in Scaffolding**, along with the Scaffold Industry Association Training Program **Scaffold Hazard Awareness Training**. Each successful participant will receive an OSHA Certificate of Completion in the OSHA/EMEC Trainer Course in Scaffolding, a Certificate of Completion and a Waller card issued by the Scaffolding Industry Association Training Program in Scaffold Hazard Awareness Training.

Scaffolding 103 is instructed by **David H. Glabe, P.E.**, President of D.H. Glabe & Associates. Mr. Glabe is a registered professional engineer who has developed and conducted numerous training and skill evaluation programs for the scaffolding industry. He co-developed the course work and training manual for the highly respected scaffold training courses of the Scaffold Industry Association Training Program. With over 33 years of experience in the scaffold industry, Mr. Glabe serves as one of the primary instructors in scaffold training for the FED/OSHA Training Institute and Cal/OSHA, and is the Scaffold Industry Association's liaison to OSHA.

This course will be held at the Associated General Contractors, San Diego Chapter Training Facility at 6212 Ferris Square, San Diego, California.
